AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

(Withdrawn) A transgenic mouse comprising:

a) a disrupted H2 class I gene;

b) a disrupted H2 class \I gene; and

c) a functional HLA class I or class II transgene.

2.-7. (Cancelled)

8. (Currently Amended) A method of simultaneously identifying the presence of one or more epitopes in a candidate antigen or group of antigens, wherein the epitope elicits a specific humoral response, a TH HLA-DR1 restricted response, and/or a CTRL HLA-A2 restricted response. the method comprising:

a) administering the candidate antigen or group of candidate antigens to the <u>a transgenic</u> mouse of claim 3 or claim 6 deficient for both H2 class I and class II molecules, wherein the transgenic mouse comprises a functional HLA class I transgene and a functional HLA class II transgene:

b) assaying for a specific humoral response in the mouse to the antigen;

 assaying for a TH HLA-DR1 restricted response in the mouse to the antigen; and

 assaying for a GTRL HLA-A2 restricted response in the mouse to the antigen; wherein,

-2-

observation of a specific humoral response in the mouse to the antigen identifies an epitope which elicits a humoral response in the antigen;

observation of a TH HLA-DR1 restricted response in the mouse to the antigen identifies an epitope which elicits a TH HLA-DR1 restricted response in the antigen; and

observation of a GTRL HLA-A2 restricted response in the mouse to the antigen identifies an epitope which elicits a GTRL HLA-A2 restricted response in the antigen; and

wherein the HLA class I transgene is an HLA-A2 transgene and the HLA class II transgene is an HLA-DR1 transgene, or

the transgenic mouse has the genotype HLA-A2*HLA-DR1*β2m°IAβ°.

 (Original) The method of claim 8, further comprising assaying for a Th1specific response in the mouse to the antigen and assaying for a Th2-specific response in the mouse to the antigen; wherein

observation of a Th1-specific response in the mouse to the antigen identifies an epitope which elicits a Th1-specific response in the mouse to the antigen; and

observation of a Th2-specific response in the mouse to the antigen identifies an epitope which elicits a Th2-specific response in the mouse to the antigen.

10. (Currently amended) A method of identifying the presence of an HLA DR1-restricted T helper epitope in a candidate antigen or group of candidate antigens, the method comprising:

a) administering the candidate antigen or group of candidate antigens to the <u>a transgenic</u> mouse of claim 3 or claim 6 <u>deficient for both H2 class I and class II</u> molecules, wherein the transgenic mouse comprises a functional HLA class I transgene and a functional HLA class II transgene; and

 assaying for a TH HLA-DR1 restricted T helper epitope response in the mouse to the antioen; wherein.

observation of a TH HLA-DR1 restricted T helper epitope response in the mouse to the antigen identifies an epitope which elicits a TH HLA-DR1 restricted T helper epitope response in the antigen; and

wherein the HLA class I transgene is an HLA-A2 transgene and the HLA class II transgene is an HLA-DR1 transgene, or

the transgenic mouse has the genotype HLA-A2⁺HLA-DR1⁺β2m°IAβ°.

- (Withdrawn) An isolated antigen comprising an HLA DR1-restricted T helper epitope identified by the method of claim 10.
- (Withdrawn) The isolated antigen of claim 11, wherein the antigen further comprises an epitope which elicits a humoral response and/or an epitope which elicits a CTRL HLA-A2 restricted response.
- (Withdrawn) The isolated antigen of claim 11, wherein the antigen comprising an HLA DR1-restricted T helper epitope comprises a polypeptide.
- (Withdrawn) The isolated antigen of claim 11, wherein the antigen comprising an HLA DR1-restricted T helper epitope comprises a polynucleotide.

 (Withdrawn) The isolated antigen of claim 14, wherein the antigen comprising an HLA DR1-restricted T helper epitope comprises, DNA, RNA, or DNA and RNA

- 16. (Original) A method of identifying the presence of an HLA-A2-restricted T cytotoxio (CTL) epitope in a candidate antigen or group of candidate antigens, the method comprising:
- administering the candidate antigen or group or candidate antigens to the mouse of claim 3 or claim 6: and
- b) assaying for an HLA-A2-restricted T cytotoxic (CIL) response in the mouse to the antigen or group of antigens; wherein,

observation of an HLA-A2-restricted T cytotoxic (CTL) response in the mouse to the antigen or group of antigens identifies an epitope which elicits a an HLA-A2 restricted T cytotoxic (eTL) response in the antigen group of antigens.

- (Withdrawn) An isolated antigen comprising an HLA-A2-restricted T cytotoxic (CTL) epitope identified by the method of claim 16.
- 18. (Withdrawn) The isolated antigen of claim 17, wherein the antigen further comprises an epitope which elicits a humoral response and/or an epitope which elicits a TH HLA-DR1 restricted T helper epitope response.
- (Withdrawn) The Isolated antigen of claim 17, wherein the antigen comprising an HLA-A2-restricted cytotoxic (CTL) epitope comprises a polypeptide.
- (Withdrawn) The isolated antigen of claim 17, wherein the antigen comprising an HLA A2-restricted T cytotoxic (CTL) epitope comprises 'a polynucleotide.

 (Withdrawn) The isolated antigen of claim 20, wherein the antigen comprising an HLA-A2-restricted T cytotoxic (CTL) epitope comprises, DNA, RNA, or DNA and RNA.

- (Withdrawn) A method of comparing the efficiency of T-helper cell response induced by two or more vaccines, the method comprising:
- a) administering a first candidate vaccine to a mouse of claim 3 or claim 6 and measuring the T-helper cell response induced in the mouse by the first candidate vaccine;
- b) administering a second candidate vaccine to a mouse of claim 3 or claim 6 and measuring the T-helper cell response induced in the mouse by the second candidate vaccine:
- c) administering each additional candidate vaccine to be compared to a mouse of claim 3 or claim 6 and measuring the T-helper cell response Induced in the mouse by each additional candidate vaccine to be compared; and
- d) determining the efficiency of each candidate vaccine to Induce a Thelper cell response by comparing the T-helper cell responses to each of the vaccines to be compared with each other.
- (Withdrawn) The method of claim 22, wherein the T-helper cell response Is an HLA DR1 restricted response.
- 24. (Withdrawn) A method of comparing the efficiency of T cytotoxic cell response induced by two or more vaccines, the method comprising:
 - a) administering a first candidate vaccine to a mouse of claim 3 or. .

claim 6 and measuring the T cytotoxic cell response induced In the mouse by the first candidate vaccine:

- b) administering a second Candidate vaccine to a mouse of claim 3 or claim 6 and measuring the T cytotoxic cell response induced in the mouse by second candidate vaccine:
- c) administering each additional candidate vaccine to be compared to a mouse of claim 3 or claim 6 and measuring the T cytotoxic cell response induced In the mouse by each additional candidate vaccine to be compared; and
- d) determining the efficiency of each candidate vaccine to induce a T cytotoxic cell response by comparing the T cytotoxic cell responses to each of the vaccines to be compared with each other.
- (Withdrawn) The method of claim 24, wherein the T cytotoxic cell response is an HLA-A2 restricted response.
- 26. (Withdrawn) A method of simultaneously comparing the efficiency of T-helper cell response and T cytotoxic cell response induced by two or more vaccines, the method comprising:
- a) administering a first candidate vaccine to a mouse of claim 3 or .
 claim 6 and measuring the T-helper cell response and T cytotoxic cell response induced in the mouse by the first candidate vaccine;
- administering a second candidate vaccine to a mouse of claim 3 or claim 6 and measuring the T-helper cell response and T cytotoxic cell response induced in the mouse by the second candidate vaccine;

c) administering each additional candidate vaccine to be compared to a mouse of claim 3 or claim 6 and measuring the T-helper cell response and T cytotoxic cell response induced In the mouse by each additional candidate vaccine to be compared; and

- d) determining the efficiency of each candidate vaccine to induce a T-helper cell response and T cytotoxic cell response by comparing the T-helper cell response and T cytotoxic cell response to each of the vaccines to be compared with each other.
- 27. (Withdrawn) The method of claim 26, wherein the T-helper cell response is an HLADR1 restricted response, and wherein the T cytotoxic cell response is an HLA-A2 restricted response.
- 28. (Withdrawn) A method of simultaneously determining the humoral response, the T-helper cell response, and the T cytotoxic cell response of a mouse following its immunization with an antigen or a vaccine comprising one or more antigens, the method comprising:
- a) administering the antigen or the vaccine comprising one or more antigens to a mouse of claim 3 or claim 6;
- assaying for a specific humoral response In the mouse to the antigen or vaccine comprising one or more antigens;
- assaying for a T-helper cell response in the mouse to the antigen or vaccine comprising one or more antigens; and
- assaying for a T cytotoxic cell response in the mouse to the antigen or vaccine comprising one or more antigens.

 (Withdrawn) The method of claim 28, wherein the T-helper cell response is a TH HLADR1 restricted response.

- (Withdrawn) The method of claim 28, wherein the T cytotoxic cell response is a CTRL HLA-A2 restricted response.
- 31. (Withdrawn) A method of optimizing two or more candidate vaccine compositions for administration to a human, based on preselected criteria, the method comprising:

simultaneously determining the humoral response, the T-helper cell response, and the T cytotoxic cell response of a mouse following its immunization with the two or more candidate vaccine compositions, according to claim 28; and selecting an optimized vaccine by applying preselected criteria to the results.

- (Withdrawn) The method according to claim 31, wherein the two or more candidate vaccines differ only in the ratio of antigen to adjuvant present in the vaccine.
- 33. (Withdrawn) The method according to claim 31, wherein the two, or more candidate vaccines differ only in the type of adjuvant present in the vaccine.
- 34. (Withdrawn) A method of determining whether a vaccine poses a risk of induction of an autoimmune disease when administered to a human, the method comprising:
 - a) administering the vaccine to a mouse of claim 3 or claim 6; and
 - b) assaying for an autoimmune response in the mouse; wherein

observation of an autoimmune response in the mouse indicates that the vaccine poses a risk of induction of an autoimmune disease when administered to a human.

- 35. (Withdrawn) An Isolated transgenic mouse cell comprising:
 - a) a disrupted H2 class I gene:
- b) a disrupted H2 class II gene; and 'c) a functional HLA Class I or class II transgene.
 - 36.-41. (Cancelled)
